

Project Name	Import Data using Transform Maps	Maximum Marks	2 Marks
Date	31 January 2025	Team ID	6ab615fddcdade33acb38af6f

Problem - Solution Fit Canvas Analysis

This document maps customer pain points, behaviors, and root causes to the proposed ServiceNow solution: bulk data import with Import Sets and custom Transform Maps.

1. Customer Segment(s) [CS] <i>Who is your customer?</i>	- Enterprise ServiceNow administrators. - IT service desk managers and HR data migration specialists. - System integrators handling bulk onboarding of employee, asset, or organizational records.
2. Jobs-to-be-Done / Problems [J&P] <i>What jobs-to-be-done do you address?</i>	- Migrate legacy CSV/Excel data into ServiceNow tables cleanly. - Prevent duplicate records during bulk ingestion. - Map source columns to the correct target fields. - Validate data formats before insertion and keep referential integrity (manager and department references).
3. Triggers [TR] <i>What triggers customers to act?</i>	- Frequent data corruption and errors in manual spreadsheet uploads. - Compliance audits flagging duplicate user or asset records. - An upcoming organizational restructuring that needs a large bulk user import. - Broken reference field errors during routine data loads.
4. Emotions: Before / After [EM] <i>How do customers feel?</i>	Before: Frustrated, anxious, and overwhelmed by manual data cleansing; stressed about breaking production references; fearful of audit penalties. After: Confident, relieved, and in control; assured of data accuracy, efficient, and audit-ready.
5. Available Solutions [AS] <i>Which solutions are available?</i>	- Manual CSV imports through the standard ServiceNow list view. - Custom external ETL scripts (Python, Talend). - Basic out-of-the-box Transform Maps without validation scripts. Pros & cons: Manual uploads cause duplicate entries and broken references. External ETL tools need complex middleware and separate infrastructure.
6. Customer Constraints [CC] <i>What constraints limit choices?</i>	- Strict security policies that restrict external middleware. - Limited administrator time for manual spreadsheet error-checking. - Budget limits on third-party ETL licenses. - Performance limits on large data batches.
7. Behaviour [BE] <i>What does the customer do?</i>	- Spends hours cross-referencing spreadsheets in Excel before uploading. - Writes ad-hoc background scripts to clean data. - Fixes broken reference fields one by one in ServiceNow tables.
8. Channels of Behaviour [CH] <i>Online and offline channels</i>	8.1 Online: ServiceNow Community forums, developer documentation, ServiceNow Academy courses, GitHub repositories for transform scripts, and IT service management webinars. 8.2 Offline: Enterprise IT architecture review meetings, internal data governance workshops, and administrator training sessions.
9. Problem Root Cause [RC] <i>Why does the problem exist?</i>	- Legacy data systems lack standardized validation rules. - Out-of-the-box import sets lack contextual relational mapping and intelligent deduplication. - Manual data entry introduces human error and inconsistent formatting.

10. Your Solution [SL] Your solution proposition	An advanced ServiceNow data ingestion and transformation framework built on Import Sets and custom Transform Maps. Key features: - Automated coalesce key (u_emp_id) for intelligent deduplication. - Custom onBefore validation scripts. - Dynamic dot-walking to resolve reference fields (sys_user, cmn_department). - Role-based Access Control Lists (ACLs) for secure, error-free bulk onboarding.
---	--

Fit Summary: Problem to Solution

How each root cause is answered by a solution feature, and how the team can tell the fit is working.

Problem / Root Cause	Solution Feature	Measure of Fit
Duplicate records from bulk loads	Coalesce key (u_emp_id)	Zero duplicates when the same file is imported twice
Broken manager / department references	Dot-walking to sys_user and cmn_department	All rows resolve references; unresolved rows are logged
Bad or inconsistent source data	onBefore validation scripts	Invalid rows are rejected with a clear reason
Exposure of sensitive records	Role-based ACLs	Unauthorized test users are denied access
Hours of manual cleanup	Automated Import Set and Transform Map	Admin fixes no records by hand after import

The measures of fit are suggested acceptance checks for the team to confirm.

Risks to the Fit

Risk	Mitigation
Source CSV has missing or non-standard employee IDs	Validate IDs before import; reject blank coalesce keys.
Manager or department data is incomplete in sys_user	Check user data completeness first; flag empty dot-walked values.
Large files strain instance performance	Import in batches and run during low-usage windows.
