

Project Name	Import Data using Transform Maps	Maximum Marks	4 Marks
Date	31 January 2025	Team ID	6ab615fddcdcae33acb38af6f

Data Flow Diagram (DFD)

System overview: The DFD shows how information moves through the ServiceNow import and transform pipeline. Data enters from legacy CSV sources, lands in a staging table, is transformed by the Transform Map (coalesce and dot-walking), and is finally stored in the target table under strict role-based access control.

Data Flow Description

Step	Stage	What Happens
1	User Configuration	The administrator uploads the legacy CSV data file into the ServiceNow Import Sets module.
2	Staging Table Ingestion	Raw records are parsed and stored in the staging table (u_training_staging) without altering production data.
3	Transform Execution & Coalesce	The Transform Map checks incoming rows against existing records using coalesce keys (for example, Employee ID) to decide whether to insert or update. Dot-walking resolves department and manager references.
4	Target Table Storage & Security	Clean, validated records are written to the target table (u_employee_training_records), which is protected by role-based ACLs.

User Stories

Stories cover the full lifecycle of importing legacy CSV data with ServiceNow Transform Maps, organized by user type, epic, priority, and sprint release.

User Type	Epic	USN	User Story / Task	Acceptance Criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and password confirmation.	I can access my account and dashboard after registering.	High	Sprint-1
Customer (Mobile user)	Registration	USN-2	As a user, I receive a confirmation email once I have registered for the application.	I receive the confirmation email and can click to confirm.	High	Sprint-1
Customer (Mobile user)	Registration	USN-3	As a user, I can register for the application through Facebook.	I can register and access the dashboard using Facebook Login.	Low	Sprint-2
Customer (Mobile user)	Registration	USN-4	As a user, I can register for the application through Gmail.	OAuth authentication succeeds and creates my user profile.	Medium	Sprint-1
Customer (Mobile user)	Login	USN-5	As a user, I can log into the application by entering my email and password.	A user session is established and the dashboard loads.	High	Sprint-1
Customer (Mobile user)	Dashboard	USN-6	As a user, I can view my profile and import status on the mobile dashboard.	The dashboard shows real-time status widgets.	Medium	Sprint-2
Customer (Web user)	Data Import	USN-7	As a web user, I can upload legacy CSV training records into staging tables.	The CSV parses correctly and staging records are populated.	High	Sprint-1
Customer Care Executive	Support & Logs	USN-8	As a support executive, I can review transform staging error logs and failed rows.	Error logs show failure reasons for troubleshooting.	Medium	Sprint-2
Administrator	Transform Maps	USN-9	As an admin, I can configure coalesce keys and dot-walking reference mapping rules.	The transform engine updates existing records without creating duplicates.	High	Sprint-1
Administrator	Security & ACLs	USN-10	As an admin, I can configure role-based access control and table ACLs.	Unauthorized users are restricted from sensitive records.	High	Sprint-2

Release and Priority Summary

Release	Stories	Included	Focus
Sprint-1	6	USN-1, 2, 4, 5, 7, 9	Registration, login, CSV upload, and coalesce / dot-walking configuration
Sprint-2	4	USN-3, 6, 8, 10	Facebook sign-in, mobile dashboard, error log review, and role-based security

Priority split: High 6 (USN-1, 2, 5, 7, 9, 10), Medium 3 (USN-4, 6, 8), Low 1 (USN-3). Every High-priority story except USN-10 is in Sprint-1, so the core import path is working first; role-based security (USN-10) follows in Sprint-2.

Summary Notes

The user stories cover the end-to-end lifecycle of importing legacy CSV data with ServiceNow Transform Maps, and include the requested template user types and sprint allocations.
